

- 1 According to the author, if preparation is limited to the enamel, this would create:
- a Excessive flexibility
 - b Insufficient flexibility
 - c Complex bonding issues
 - d None of the above
- 2 Which of the following describes the best scenario for placing veneers?
- a When the teeth are aligned perfectly on the dental arch
 - b When the facial structures of the teeth are not worn
 - c The teeth are crowded
 - d Both a and b
- 3 For the standard preparation technique, at how many angles should the bur be used to be faithful to the facial convexity of the tooth structure?:
- a One
 - b Two
 - c Three
- 4 With this type of treatment, in the event of the dentist and patient not agreeing on the aesthetic outcome:
- a The patient's wishes should be respected
 - b The dentist should make the decision on the patient's behalf
 - c A compromise should be reached
 - d The dentist should refuse to carry out the treatment
- 5 Which of the following should be considered before a three-dimensional overview is required?
- a The patient's teeth
 - b Surrounding soft tissue.
 - c The patient's facial characteristics
 - d All of the above.
- 6 Which of the following statements is correct?
A simple freehand carved composite mock-up will: :
- a Give the dentist an idea of where to place the facial bulkiness and and its effect on the lip structure
 - b Indicate the final contours of the teeth
 - c Assist the lab technician to build up his wax up
 - d a and c
 - e none of the above
- 7 Using Aesthetic pre-evaluative temporaries (APT) the functional movements of the patient should be evaluated to see whether:
- a An anterior constriction is present
 - b Orthodontic treatment is required
 - c The gingival levels need to be altered
- 8 In PLV preparation, dentists tend to finish the gingival chamfer supragingivally unless they are dealing with:
- a Severe discolouration
 - b Spaced dentition
 - c None of the above
 - d a and b
- 9 The author recommends bonding should start with:
- a Laterals
 - b Centrals
 - c Canines
- 10 Which rules should be followed when using PLV's as a treatment option?
- a Communication between dentist, patient and ceramist
 - b Careful case selection and treatment planning
 - c Use of mock-ups, wax-up, APT and silicone index
 - d All of the above
 - e None of the above
