

CPD QUESTIONNAIRE 10.6.1

Article: Hard tissue augmentation using an allogenic bone block: a clinical case report. Marchand et al, page 20

- In a lack of bone which may complicate the implant placement, what grafting procedure is the gold standard according to the authors?

 - Autogenous bone blocks
 - Autologous bone blocks
 - Allogenic bone blocks
- In the case described, amalgam staining in the keratinized mucosa at which site was observed:

 - Site 24
 - Site 25
 - Site 26
- In the case described, implant placement with simultaneous guided bone regeneration (GBR) could not be performed. True or false?

 - True
 - False
- Implant placement at position 24 was performed after a healing period of:

 - 2 weeks
 - 8 weeks
 - 9 months
- Which statements are correct: During the prosthetic procedure:

 - The provisional crown was screw-retained onto the implant
 - The provisional crown was cement-retained onto the implant
 - The temporary crown was cemented onto the bonding base using a self-curing composite cement
 - b and c
 - e. a and c

Article: Management of the MB2. Patel, page 32

- By what other term is the MB2 known as?

 - Second canal
 - Third canal
 - Fourth canal
 - Mesio-lingual canal
- Which statement is correct: Studies have shown the incidence of MB2 canals is roughly:

 - 60% in maxillary first molars and 60% in maxillary second molars
 - 90% in maxillary first molars and 60% in maxillary second molars
 - 60% in maxillary first molars and 90% in maxillary second molars
- A missed MB2 canal can be the cause of:

 - Ongoing temperature sensitivity
 - Residual bacteria
 - Neither of the above
 - Both of the above
- Which statement is correct: Studies have shown that the frequency of MB2 canal detection for dental loupes is:

 - 71.1%
 - 62.5%
 - 17.2%
- For the final preparation of the MB2 canal, what instrument does the author recommend?

 - Small hand files (size 8-10)
 - A slightly less tapered (6%) rotary file
 - Neither of the above

CPD QUESTIONNAIRE 10.6.2

Article: COVID-19 risk management in dental practice Part 1: Seven Pandemics and 100 years later – What lessons have we learnt? Hartshorne, van Zyl, page 48

- Which of the following is not a pandemic?

 - Spanish flu
 - Asian Flu
 - Annual seasonal flu
 - Swine flu
 - Hong Kong flu
- Which of the following statements regarding common features of pandemics is TRUE?

 - They are all caused by coronavirus
 - Transmission is by respiratory droplets
 - Symptoms are not similar to seasonal flu
 - They do not occur in waves
 - Secondary bacterial pneumonia is not a common feature
- Coronavirus mortality is measured by the basic reproductive number R_0 (TRUE or FALSE?)

 - True
 - False
- Which of the following statements regarding factors most likely contributing to superspreading events is TRUE

 - Individuals with low viral load
 - Places with good ventilation
 - Places where large number of people cluster together
 - Individuals with low contact rates
- To reach herd immunity for COVID-19, likely 70% or more of the population would need to be immune. (TRUE or FALSE?)

 - True
 - False

Article: COVID-19 risk management in dental practice Part 1: Seven Pandemics and 100 years later – What lessons have we learnt? Hartshorne, van Zyl, page 48

- COVID-19 originated in:

 - Mexico
 - Hong Kong
 - Wuhan
 - Jeddah
 - Yunan
- The incubation period for COVID-19 is:

 - 1-2 days
 - 2-4 days
 - 21 days
 - 2-14 days
- COVID-19 related deaths globally as at 12 June 2020 were approximately:

 - 866
 - 284,000
 - 400,000
 - 1,130,000
 - 4,000,000
- Which of the following statements fits the COVID-19 disease profile:

 - Very contagious
 - Slow mortality rate
 - More people have severe symptoms
 - No asymptomatic spread.
- Which of the following statements regarding COVID-19 is TRUE:

 - Younger age groups are at greater risk
 - Highest death rate is amongst 13-34 age
 - COVID-19 has the highest mortality rate of all pandemics
 - Individuals with medical co-morbidities are at greater risk
 - COVID-19 has spread 74 countries
